

BARBOOT®

DRILLED SHAFT REBAR SUPPORT

Self-locking rebar supports for vertically stabilizing rebar cages and providing proper clearance between the reinforcement cage and the earthen surface.

WHY USE IT?

In order to support the entire rebar cage vertically within the drilled shaft and provide proper clearance between the rebar reinforcement and the earthen surface at the bottom of the shaft. The encapsulation of the ends of the vertical rebar provides added corrosion protection.

APPLICATIONS

- Bridge Foundations
- Building Foundations
- Retaining Wall Foundations
- Street Light Foundations
- High Mast Foundations
- Transmission Line Foundations
- Sub-station Foundations
- Tower Foundations
- Slurry Walls

ADVANTAGES

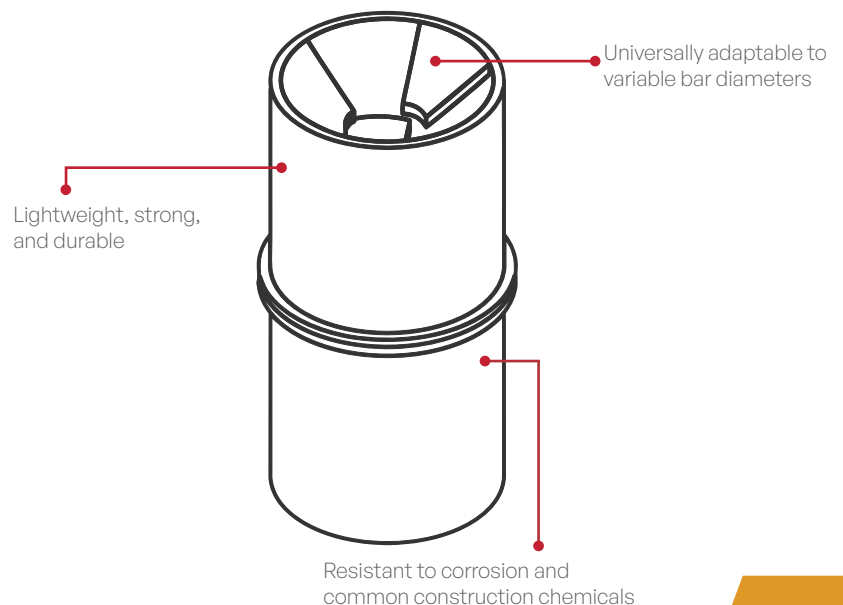

- Saves time and money
- Easy installation
- Universally adaptable to variable size bar diameters (one size fits all)
- Self-locking
- Lightweight, yet strong and durable
- Engineered with the contractor in mind
- Made of high-density plastic, resistant to corrosion, and chemicals common to construction
- Economical to use
- Indefinite shelf-life and easily stored

CONSTRUCTION BENEFITS

- Protects from bar end corrosion.
- Ensures that the bar reinforcement is properly spaced and supported within the confines of the drilled shaft or excavation.
- Provides quality assurance of the contractor's performance for the engineer and owner.

MIN. PLACEMENT RECOMMENDATIONS

- Equally space boots around bottom of the cage
- Use one Barboot per 1500 lbs. of steel cage weight; minimum of one Barboot every other vertical bar

WE'VE GOT YOUR CLEARANCE COVERED.™

Born on the job site, Foundation Technologies knows the value of having the right tool for every job. Barboot® is a reliable and cost-effective solution, designed to fit any bar size and install easily with one hand.

Guiding rebar cage into drilled shaft with Barboots attached

MODEL	COVER	BAR SIZE	PACKAGING	WEIGHT
BB711	3.0"	#5 - #18*	50	29 lbs
BB711-6	6.0"	#5 - #18*	25	24 lbs

**For #18 bar, please call to verify cage weight.*

Attaching Barboot
