

YELLOW JACKET® SOLAR PILE SLEEVES

THE PROBLEM

Frost Heave

What is Frost Heave? Frost heaving is an upwards swelling of soil during freezing conditions caused by an increasing presence of ice as it grows towards the surface, upwards from the depth in the soil where freezing temperatures have penetrated into the soil.

THE SOLUTION

Yellow Jacket® Solar Pile Sleeves help to mitigate frost heave with solar panel W piles. Yellow Jacket® is a prefabricated pile sleeve which provides a slip plane between the W pile and the soil.

- ✓ Not a Coating
- ✓ Quick, Easy Installation
- ✓ Requires No Special Construction Equipment
- ✓ Safe
