

PILE CANS™

FOR AUGERCAST PILES

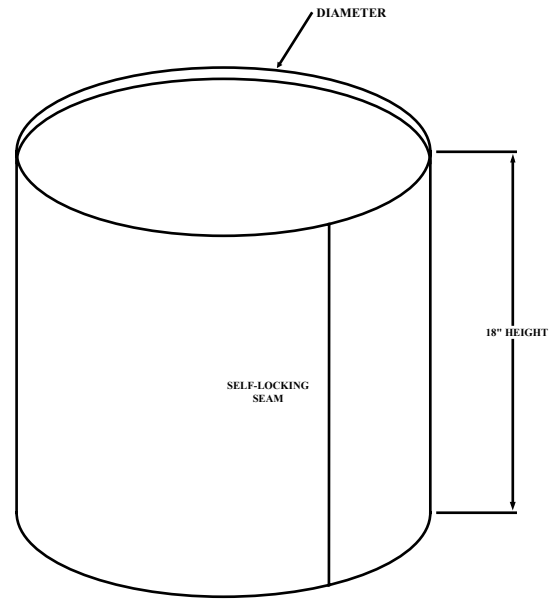

Pile Cans are a simple, cost-effective solution for finishing augercast piles above grade.

Our cans cut down contamination as installers finish setting cages and center bar reinforcement. Commonly used in augercast piles, Pile Cans can also be used for grout reservoirs and with other pile applications.

These cans, also called “tops,” “tins,” or “sleeves,” are more durable and cost effective than paper-based alternatives and present significant time and material savings over job site modifications, cutting, and fastening.

Pile Cans are inexpensive and easy to install. The self-locking seam provides a simple, reliable, and safe assembly in under 10 seconds.

Foundation Technologies offers a variety of pre-cut sizes for various pile diameters. Custom sizes can also be made by request.

FEATURES

- 26 Gauge, 30g Galvanized Steel
- Reusable And 100% Recyclable
- Top Edge Folded For Safety, Bottom Edge Raw For Depth Setting
- Made In The USA
- Self-Locking Seam

STOCK SIZES (18" HEIGHT)
